# SURFACE FINISHING AND DETAILING BROCHURE

**AUTOMOTIVE**

**ENGINEERED  
ABRASIVE  
TECHNOLOGY**

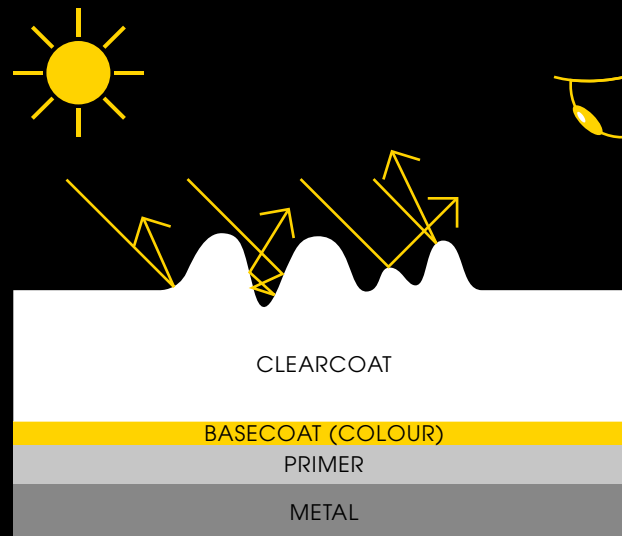

**UNIQUE FARÉCLA ABRASIVE POWDER**

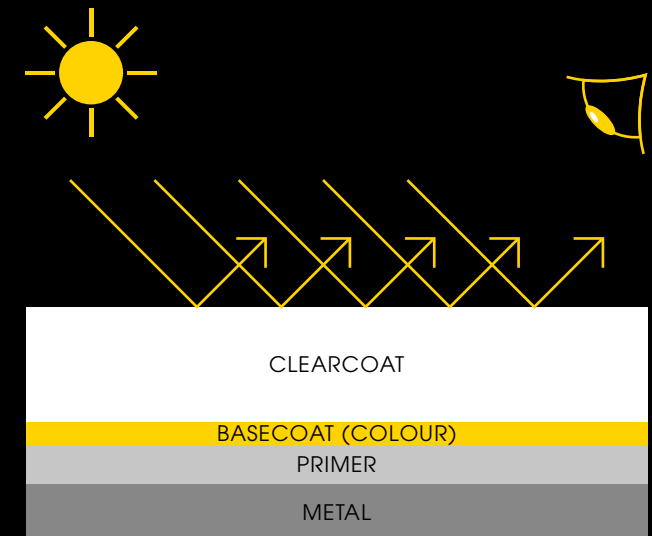

Farécla compounds use Engineered Abrasive Technology developed by our scientists in a state-of-the-art R&D facility. Only the highest quality raw materials are used to ensure the engineered particles quickly, efficiently and permanently remove defects, such as scratches, sanding marks, swirls, holograms and oxidation.

**WHY POLISH  
THE SURFACE?**

Defects have a variety of negative effects on visible light which the eye perceives as a reduction in surface quality. Polishing the surface removes the defects which can no longer effect light, leaving a high gloss finish.

**SURFACE DEFECTS HAVE A NEGATIVE  
EFFECT ON VISIBLE LIGHT**

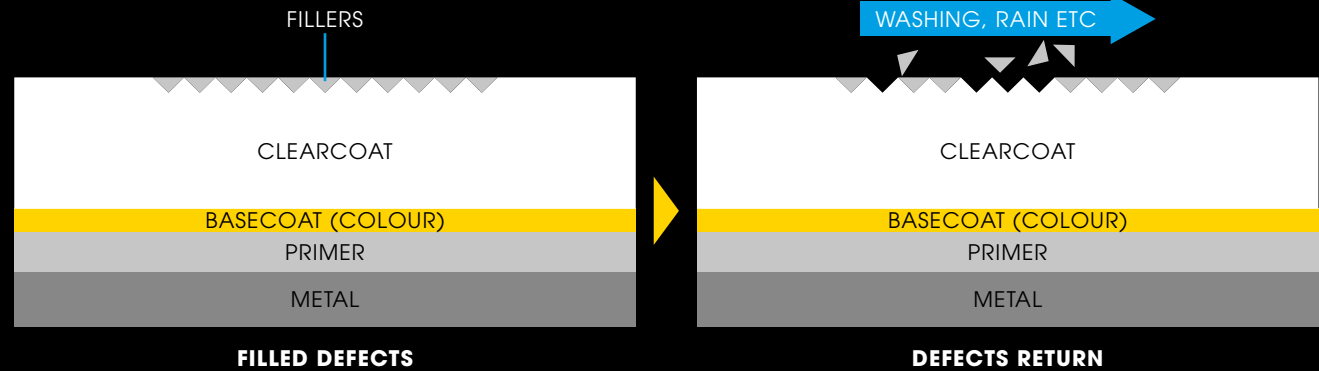

**POLISHED SURFACES PROVIDE  
A PERFECT REFLECTION (HIGH SHINE FINISH)**

# WHAT YOU SEE IS WHAT YOU GET

## SURFACE RECTIFICATION

## FILLING VS PERMANENT DEFECT REMOVAL

Farécla use abrasives to permanently remove defects. Fillers are a quick way to give the temporary illusion of a polished finish. These fillers can fall away causing defects to return. Farécla's engineered abrasive technology prevents comebacks and provides a permanent finish.

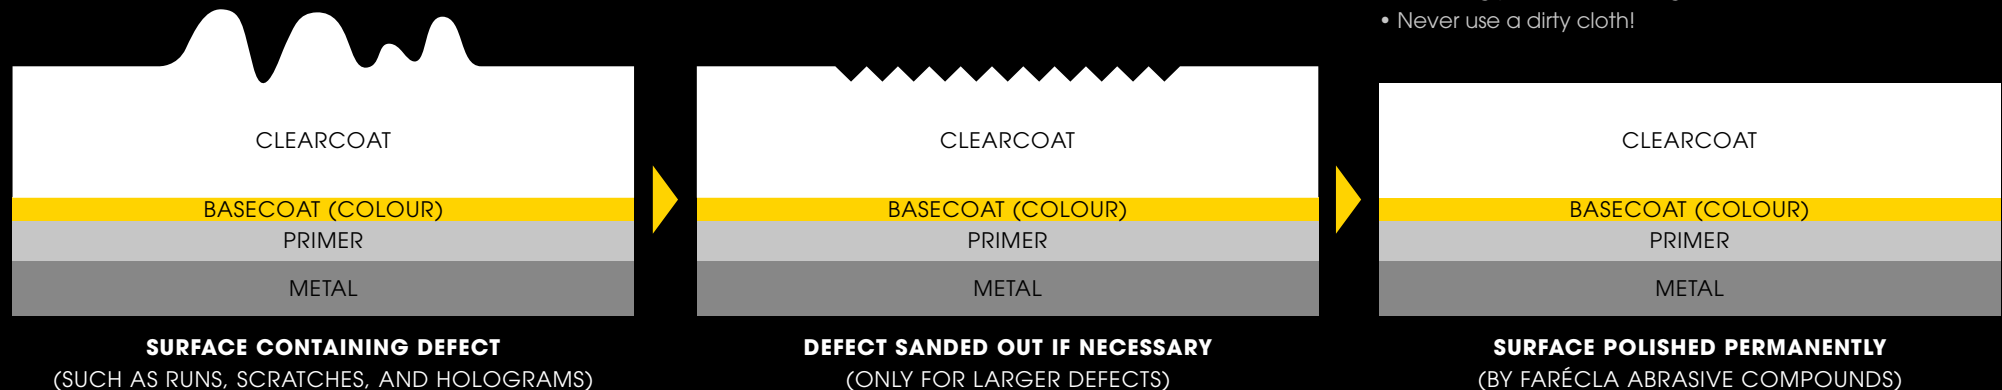

## OUR RESTORE PROCESS IN SHORT

The surface finishing process can differ depending on the defects. Larger defects will need sanding down before polishing to a mirror finish, whereas smaller defects may only require polishing.

TIPs:

- Ensure surfaces are thoroughly clean before polishing to prevent additional defects being applied to surfaces
- Ensure pads are clean before use. Dried compound can clog pads and damage surfaces
- Never use a dirty cloth!
